

Hakan Inal's Teaching Interests

I began teaching when I was an undergraduate student in Computer Engineering by volunteering to teach computer courses in my former high school. Since then, I have worked as a teaching assistant and as an instructor to several mathematics and economics courses. My performance has been recognized on various occasions. For example, at Bogazici University in Turkey, I received letters of honorary mention from the Dean and the Rector for my performance as a teaching assistant in a linear algebra course offered to Economics majors, and at the University of Minnesota I received Distinguished Instructor Award for my teaching performance in Principles of Microeconomics class.

I gained extensive teaching experience by teaching several courses in Economics at the University of Minnesota. I taught several courses including Principles of Microeconomics, Public Economics, International Economics and Intermediate Microeconomics.

I am comfortable teaching Microeconomics, Mathematical Economics, Business Statistics, Public Economics, Political Economy, Game Theory, International Economics, Law and Economics, Industrial Organization, and Mechanism Design. I will be happy to expand my teaching portfolio.
